

Automatic net packaging machine UC21 for different types of nets

The Strauss UC21 Net bagger is the ideal add-on to the EW20 Single Fruit Weighing system, for packing apples or similar products weighed and/or counted into net in a very gentle way for the fruit.

The UC 21 net bagging machine is the latest and most developed version of the UC 20, which has been around for over 35 years and is used for reliable net packaging.

The UC 21 offers the possibility to use for processing all common nets such as cellulose, cotton and plastic.

The fruit is delivered by the weighingline to the two available netting tubes on corrugated conveyor belts that transport the product smoothly towards the net.

The adjustable net dispenser ensures a careful filling of the net with the fruit, creating a controlled tension of the net and therefore the consumption of the net can be regulated. Along with a label, the net is closed with a clip and ejected from the net cutter.

With an optional printer, the necessary information such as barcode, type and packing station can be printed on the label.
